**(54) MECHANISM FOR
ADJUSTING DISTANCE
AND ANGLE OF MIRROR**

(57) Abstract:

PROBLEM TO BE SOLVED: To provide a mechanism for adjusting the distance and the angle of a mirror by which the adjusting positional deviation of the mirror caused by vibration is prevented.

SOLUTION: This mechanism has a conical groove provided on a movable plate to which the mirror is attached and receiving the tip of one of three micrometer screws and a V-shaped groove provided on the movable plate and receiving the tip of the other one of three micrometer screws.
